

5. Repita o Exercício 1 usando o método do ponto médio.

a. $y' = te^{3t} - 2y$, $0 \leq t \leq 1$, $y(0) = 0$, com $h = 0,5$; solução real $y(t) = \frac{1}{5}te^{3t} - \frac{1}{25}e^{3t} + \frac{1}{25}e^{-2t}$.

$$a) y' = te^{3t} - 2y$$

$$\therefore \text{Ponto médio} \Rightarrow w_{i+1} = w_i + h \cdot f\left[t_i + \frac{h}{2} ; w_i + \frac{h}{2} f(t_i, w_i)\right]$$

$$\left\{ \begin{array}{l} K_1 = t_i + \frac{h}{2} \\ K_2 = w_i + \frac{h}{2} f(t_i, w_i) \\ w_{i+1} = w_i + h \cdot f(K_1, K_2) \end{array} \right.$$
